ESG Responsible Investment Global Development

XIN Real Estate Fintech Research Center

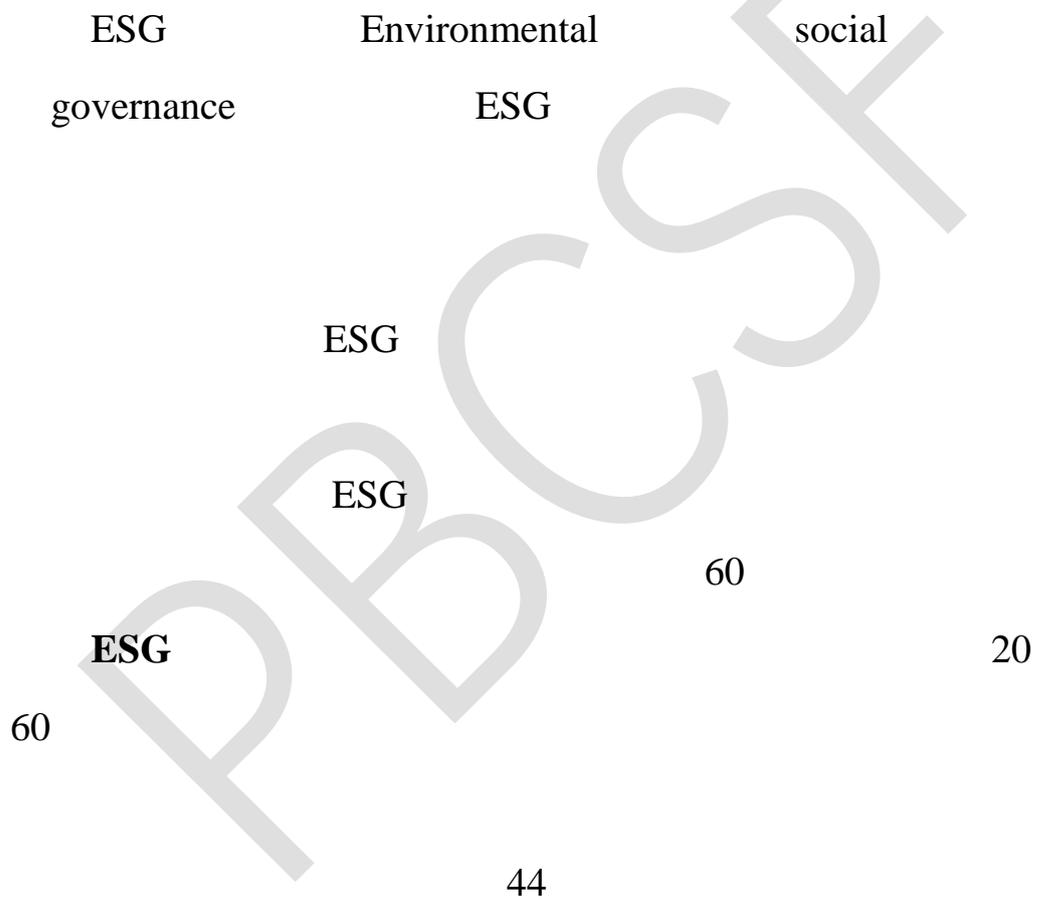

Abstract:

ESG responsible investment is an investment philosophy that incorporates the -financial indicators of environmental protection, social responsibility, and corporate governance into investment decision-making. In the context of increasing concern for the sustainable development of mankind, sustainable investment is growing rapidly on a global scale. Analyzing the development of ESG responsible investment around the world, we find that the development of ESG responsible investment regulations in Europe and the United States is relatively complete, and a good investing environment with constraints from multiple sides is gradually being formed. ESG responsible investment development in China at this stage has fully demonstrated the characteristics of the Chinese market. Under the background of encouraging supervision, China has made particularly detailed standards for environmental protection, and gradually improved the formulation of standardized rules. Reasonable development of ESG responsible
