Abstract: At present, how to build a market-oriented green technology innovation system has received much attention from the government, the market, enterprises, and academia. Green development is expected to become a more important new driver for sustainable and high-quality growth in the coming decades. However, China's green agenda is faced with the problem of insufficient green technology innovation capability and the resulting high costs of green products and services. To accelerate green technology innovations, it is necessary to address a series of financing problems faced by green technology companies. In this report, we propose a series of reforms to develop a new financial services system to support green tech innovation. The new system will be featured by: (1) multi-tier financial services, including the stock market, PE/VC funds, venture loans, guarantee and insurance mechanisms, to solve
